Sample PDF File

This is a sample PDF document created using Python's FPDF library. It demonstrates the ability to generate PDFs dynamically for various purposes, including reports, invoices, or presentations. The FPDF library is lightweight, easy to use, and supports features such as text formatting, images, and tables.

You can customize the layout, font styles, and page sizes as needed. This flexibility makes it a popular choice for developers looking to integrate PDF generation into their applications.

Thank you for viewing this sample!
